Subpart—Grade and Size Regulation

§917.459 California Peach Grade and Size Regulation.

(a) During the period beginning April 1 and ending November 23, no handler shall ship:

(1) Any lot or package or container of any variety of peaches unless such peaches meet the requirements of U.S. No. 1 grade: *Provided*, That an additional 25 percent tolerance shall be permitted for fruit with open sutures which are damaged, but not seriously damaged: *Provided further*, That peaches of the Peento type shall be permitted a 10 percent tolerance for healed, non-serious, blossom-end growth cracks: *Provided further*, That during the period April 1 through November 23, 2001, any handler may handle peaches if such peaches meet "CA Utility" quality requirements. The term "CA Utility" means that not more than 40 percent of the peaches in any container meet or exceed the requirement of the U.S. No. 1 grade, except that when more than 30 percent of the peaches in any container meet or exceed the requirements of U.S. No. 1 grade, the additional 10 percent shall have non-scoreable blemishes as determined when applying the U.S. Standards for Grades of Peaches; and that such peaches are mature and are:

(i) Free from insect injury which has penetrated or damaged the flesh; split pits which cause an unhealed crack or one or more healed cracks which, either singly or in the aggregate, are more than $\frac{1}{2}$ inch in length; and mold, brown rot, and decay; and

(ii) Free from serious damage due to cuts, skin breaks, growth cracks, bruises, scab, rust, blight, disease, hail or other causes. Damage to any peach is serious when it causes a waste of 10 percent or more, by volume, of the individual peach.

(iii) *Tolerances*. Not more than 10 percent, by count, of the peaches in any container may be below the requirements prescribed by this paragraph.

Not more than one-half of this tolerance shall be allowed for any one cause. Individual containers in any lot may contain not more than one and one-half times the tolerances specified if the percentage of defects of the entire lot averages within the tolerances.

(iv) The Federal or Federal-State Inspection Service shall make final determinations on maturity through the use of color chips or such other tests as determined appropriate by the inspection agency. The Federal or Federal-State Inspection Service will use the maturity guides listed in table 1 to paragraph (a)(1)(iv) in making maturity determinations for the specified varieties when inspecting to the “well matured” level of maturity. For these varieties, not less than 90 percent of any lot shall meet the color guide established for the variety, and an aggregate area of not less than 90 percent of the fruit surface shall meet the color guide established for the variety. For varieties not listed, the Federal or Federal-State Inspection Service will use such tests as it deems proper. A variance for any variety from the application of the maturity guides specified in table 1 to paragraph (a)(1)(iv) may be granted during the season to reflect changes in crop, weather, or other conditions that would make the specified inappropriate measure of “well matured.”

When one-half the specified number of fruit in a sample results in a number ending with one-half a fruit, the smaller full number of fruit shall be used to determine the sample weight. If a sample fails with respect to minimum size requirements on the basis of an 8-pound sample, a 16-pound sample shall be used to determine if the fruit meets the minimum size requirements.
